

# Case Studies for Network Diagnostics

presented by... Eric Ziegler

Vehicle networks are crowded with electronics, requiring multiple protocols to interconnect the different types of modules.

This class delivers a diagnostic game plan that can be applied to all network problems.

The routine provided uses scan data, scopes, wiring diagrams and service information to help you map out a diagnostic plan and test locations.

## Discussion topics:

- Components of the diagnostic game plan
- Using service information and help with wiring diagrams
- Color coding your map and schematics
- How to simplify your network problem
- Identifying the test locations & how tests are done
- How to identify different protocols
- Voltage specs for network protocols

See a step by step dual channel scope setup to monitor PCM / BCM commands and the actual data bus results.

## Our diagnostic routine gives you confidence and skill.

Date: Monday November 6, 2017 6:30 – 10:00 PM

Location: Holiday Inn French Quarter 10630 Fremont Pike, Perrysburg, OH.

Cost: \$140
